UPWORK PORTFOLIO WORK SAMPLE

Kanem Freight Account Recovery and Growth

From a cancellation threat to a renewal 50% larger than the original

Prepared by Umekulume Chinwendu Maryann | Customer Success Associate

Journey mapping | Account recovery | Product adoption | Early-warning automation | Renewal and expansion

Work sample for Olumo Workforce, a payroll and workforce platform

01 THE CHALLENGE

A new CFO put a $16,400 a year account at risk

$16,400

Annualised value at risk

1,200 seats × $1.14 × 12 (₦21.6m)

$8,200

Annualised value of the 600-seat offer

Half the original account (₦10.8m)

$16,400

Exposure if Kanem cancelled

The full account, lost (₦21.6m)

1 Jul 2026

Renewal date

The deadline for a decision

Kanem Freight is a haulage firm in Apapa with 1,200 staff and depots in Kano and Port Harcourt. It has been an Olumo customer since 2023.

Bola Adeleke, the HR Director who bought Olumo, resigned in February 2026. In April, the new CFO, Musa Abdullahi, gave two options: cut to 600 seats, or cancel and go back to Excel and bank schedules.

The brief: recover the account, then grow it.

Figures are our calculations from seat count and rate, annualised and not recognised revenue.

Mapping the journey showed exactly where the account slipped

1 Buy	2 Onboard	3 Use	4 Drift	5 Crisis	6 Recover	7 Grow
2023	2023	2023 to Oct 2025	Oct 2025 to Feb 2026	Feb to Apr 2026	Apr to Jul 2026	After 1 Jul 2026

Red: where the customer drifted. Green: recovery and growth.

What went wrong

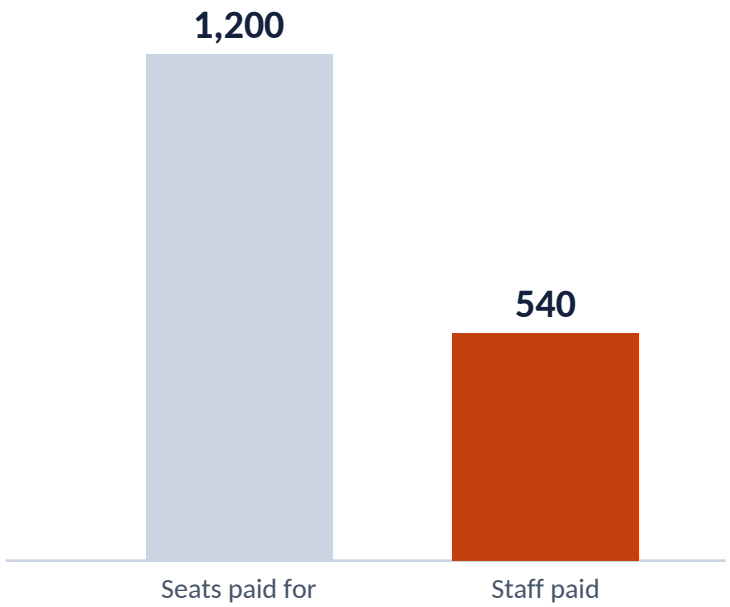

Head office was trained and depots were not. Nobody reviewed usage for eight months, so the slide went unseen until Bola resigned and Musa wrote.

What the map gave us

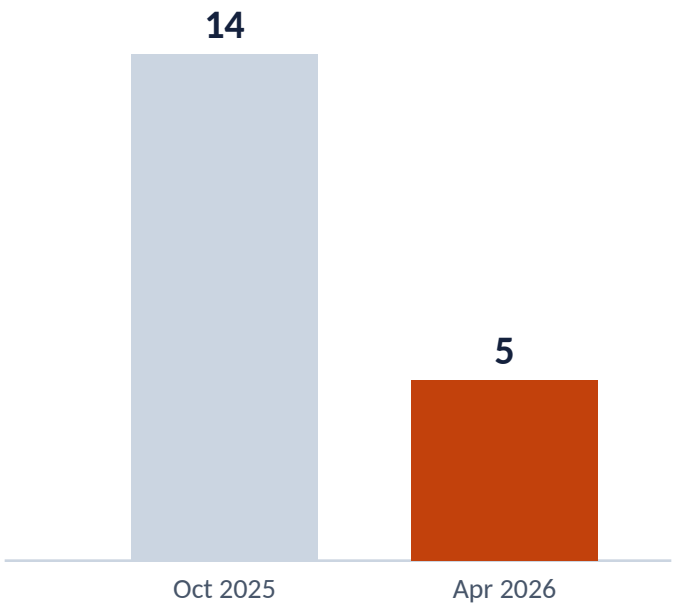

The board named Olumo's own gaps at every stage and the fix for each. That became the recovery plan, instead of a generic discount or a defensive reply.

The usage data told a different story from the invoice

Seats paid for vs staff paid (Mar 2026)

Active admins

Six warning signs nobody saw

- 45% of paid seats used in March 2026, a gap of 660
- 0 support tickets in 3 months
- 8 months since a customer review
- No NPS response
- 1 contact known, at head office
- Only head office trained; SMS payslips never switched on

04 VOICE OF THE CUSTOMER

Four voices, four gaps in Olumo's own service

MUSA, CFO

“I see an invoice every month. I do not see what we get for it.”

Gap: the CFO saw an invoice but no proof of value

FUNKE, HR MANAGER

“Bola did everything in the system. I only know how to run head office payroll.”

Gap: one champion, no second owner

AMINU, KANO

“Nobody showed us anything. We email our pay schedule to Lagos every month.”

Gap: depots never trained

SUNDAY, DRIVER

“They say my payslip is in my email. I do not have email. I ask the cashier.”

Gap: SMS payslips off

Every gap on the journey map got a specific fix

Stage	Where Olumo fell short	How we fix it
1 Buy	One champion, no second owner	Named owner and backup at Kanem
2 Onboard	Depots never trained	Train Kano and Port Harcourt
3 Use	SMS payslips off	Switch SMS payslips on
4 Drift	No review for 8 months	Usage reports and regular reviews
5 Crisis	CFO saw no proof of value	Reply fast, own the gap, book a call
6 Recover	Risk: 600 seats before results	Share summary, agree measurable targets
7 Grow	Risk: gains fade without owners	Review regularly; find the next need

From the first email to depots running payroll in four weeks

Week	Planned from the map	What I did
Week 1	Reply fast, own the gap, book a call	HubSpot email, then an in-person meeting with Musa in Apapa. Owned the usage gap, asked about his goals and milestones, and agreed a 30-day plan.
Week 2	Agree targets; fix the owner gap	Mini onboarding for Musa and Funke in the training sandbox. SMS payslips switched on.
Week 3	Train Kano and Port Harcourt	Trained both depot teams to run payroll in the platform.
Week 4	Bring admins back; make value visible	Re-engaged inactive admins, opened a Slack channel, set up Airtable voice of customer and started weekly reports.

07 SUCCESS WORKFLOW

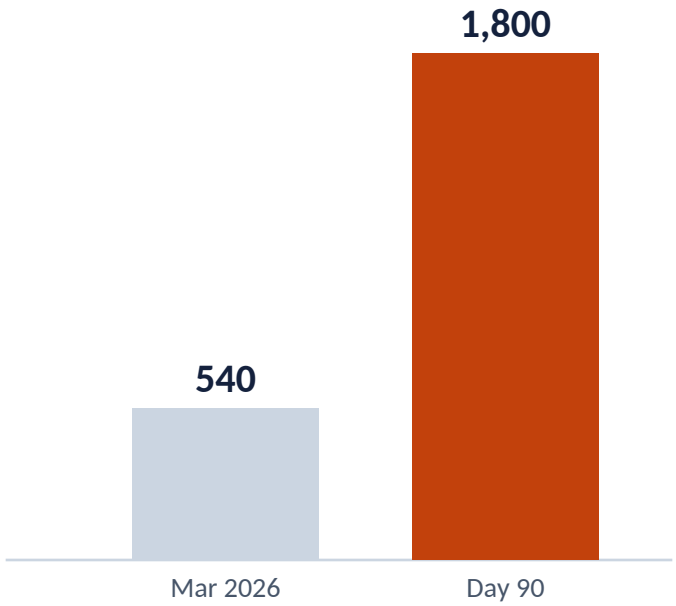

Reporting, reviews and a new early-warning system

Area	Planned from the map	What I did
Reporting	Monthly usage report	Weekly and monthly reports to Musa (Notion)
Reviews	Quarterly reviews	Executive business review at Day 60, QBR at Day 90
Early warning	Not planned on the map	Zapier + HubSpot health-score workflow: at risk, needs attention, healthy. A CSM task is created automatically.
Next need	Find the next need with Finance and HR	Musa asked for 600 more seats for a new Abuja depot

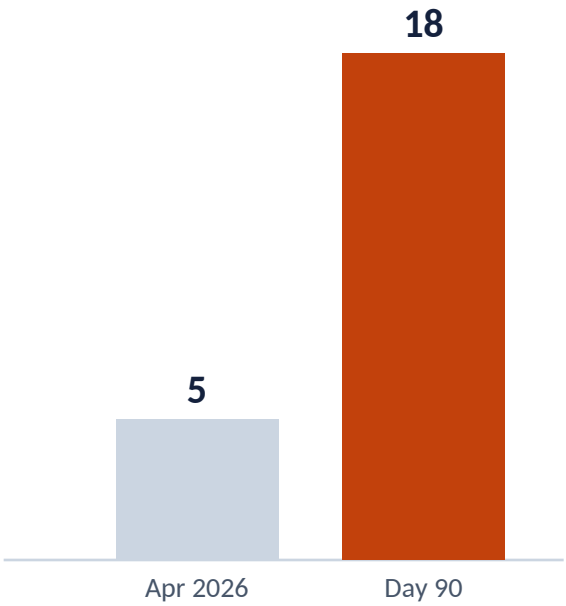

The map's Drift stage had no review and no signal. Now Musa sees what the invoice buys, and Olumo sees risk first.

Cancellation threat turned into a bigger, healthier renewal

Staff paid via platform

Active admins

$24,600
Annualised contract
1,800 × $1.14 × 12 (₦32.4m)

80
Health score at Day 90

$1.14
Cost per person paid
Was $2.53 (~~₦1,500~~, was ~~₦3,333~~)

+50%
Versus the original account
3× the 600-seat offer

Renewal agreed: 1,800 seats at $1.14 per head, for 12 months.

Kanem asked for 600 additional seats for a new Abuja depot at the Day 60 review. Seat use moved from 45% to 100%: 1,800 seats paid and 1,800 staff paid.

Four lessons that apply to any B2B SaaS account

1 **Map the journey first**

It shows the gaps and the fix for each, so the plan is specific.

2 **Own the problem**

Accountability opened the executive door.

3 **Train where the work happens**

Depots run payroll, so depots were trained, not just head office.

4 **Make value visible and automate the warning**

Reports, reviews and a health score keep the next slide from going unseen.

10 TOOL STACK

Eleven tools, each tied to a step in the recovery

Miro
MAP

Journey map: stages, gaps and fixes

Gmail
REACH

Email outreach and follow-ups

HubSpot
REACH, WARN

Outreach, account record, health score and workflow

Zoom
REACH

Remote check-ins and follow-up sessions

Trello
PLAN

Tracks the 30-day plan: actions, owners, dates

Claude
PREPARE

Drafts reports, summaries and training material

Google Vids
TRAIN

Videos of the meeting, training and automation

Slack
STAY CLOSE

Dedicated channel for Musa and Funke

Airtable
LISTEN

Voice of the customer log by theme

Notion
PROVE VALUE

Weekly and monthly reports to Musa

Zapier
WARN

Health-score automation creates CSM tasks

Map → Reach → Train → Stay close → Warn

APPENDIX

How the figures were calculated

Item	Calculation
Original account	1,200 seats × ₦1,500 = ₦1.8m a month, ₦21.6m a year. At ₦1,316 = $1: $1,368 a month, about $16,400 a year.
600-seat offer	600 × ₦1,500 = ₦0.9m a month, ₦10.8m a year. About $684 a month, $8,200 a year.
Renewal	1,800 × ₦1,500 = ₦2.7m a month, ₦32.4m a year. About $2,052 a month, $24,600 a year (+$8,200, +50%, 3× the 600-seat offer).
Cost per person paid	₦1.8m ÷ 540 = ₦3,333 ($2.53) in Mar 2026. Now ₦2.7m ÷ 1,800 = ₦1,500 ($1.14).
Admins and seats	Admins: 14 (Oct 2025), 5 (Apr 2026), 18 (Day 90). Staff paid: 540 (Mar 2026), 1,800 (Day 90).
Limits of the data	Figures are annualised and not recognised revenue. Demo files contain sample data only. Journey mood curve on the Miro board is qualitative.
