Sunrise Pocket Customer Experience Case Study

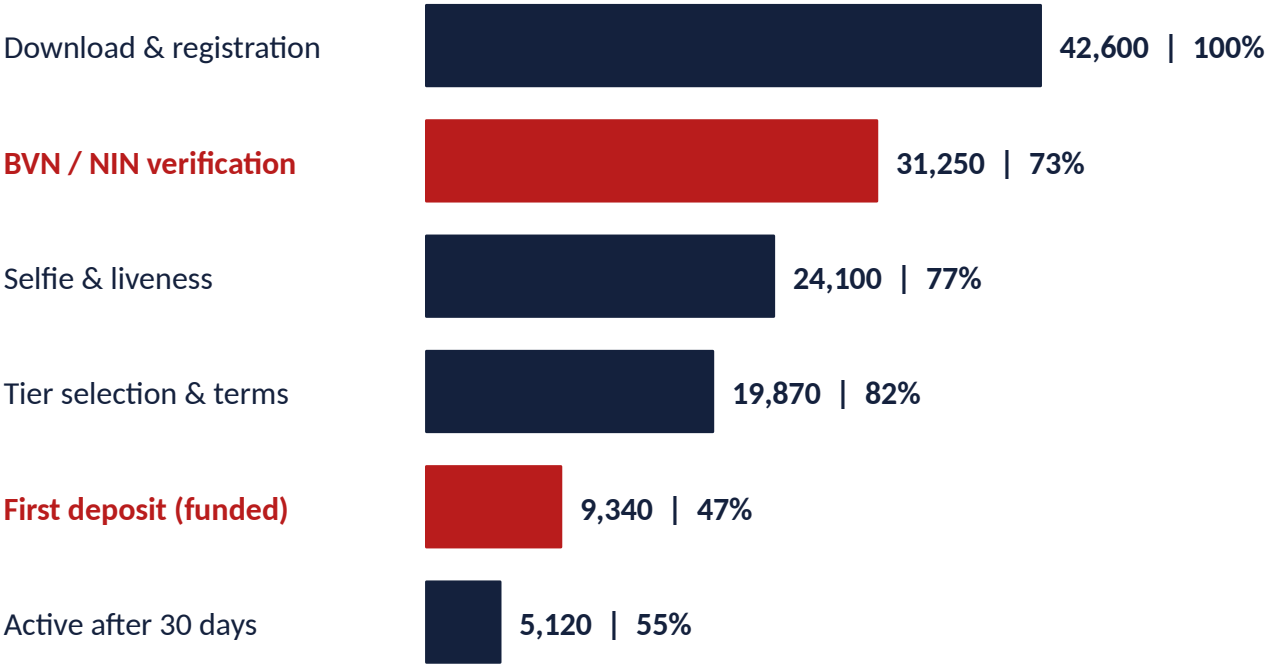

Customer Onboarding, Voice of Customer and the Redesigned Customer Journey

Prepared by Umekulume Chinwendu Maryann | Customer Success Associate

Case study project. The scenario and all figures come from the case brief.

Where customers drop off

Of 42,600 registrations, 9,340 funded their account and 5,120 (12%) were active after 30 days.

Verification

11,350

customers lost

First deposit

47%

of customers who reached terms went on to fund

Why customers dropped off: friction and silence

FRICTION The process is difficult.

SILENCE The customer does not know what is happening.

Tunde

Generator spare-parts dealer

PROBLEM

Lost verification session

FRICTION

No save-and-resume

Chiamaka

Fashion designer, Abeokuta

PROBLEM

Confusing account tiers

FRICTION

No plain-language explanation

Musa

Grains trader

PROBLEM

No communication after registration

FRICTION

Silence was interpreted as failure

Grace

Retired civil servant, Ibadan

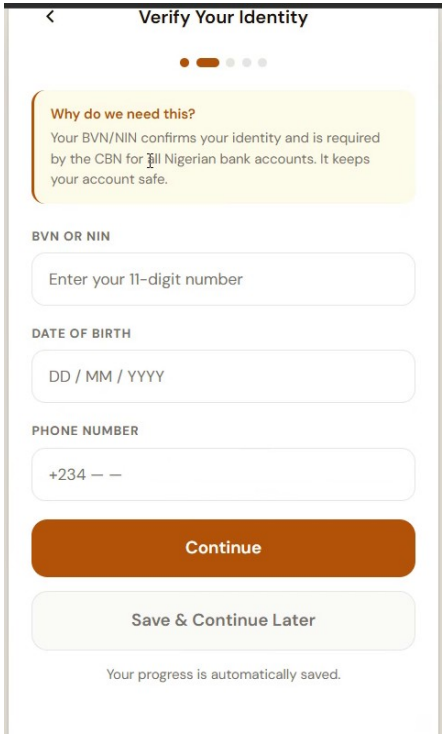

PROBLEM

No confirmation after submitting documents

FRICTION

No status visibility

Verify identity, with progress saved

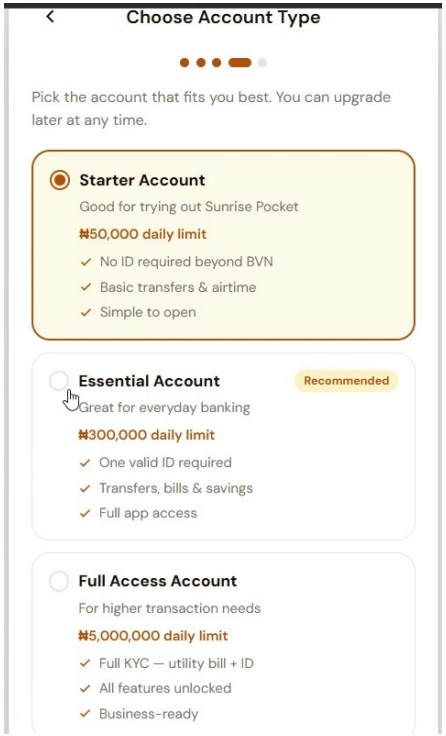

SCREENSHOT: PROTOTYPE, VERIFY YOUR IDENTITY

The screen explains why the BVN is needed and shows progress through the steps. Progress is saved automatically, and a "Save & Continue Later" button lets customers leave and return without starting over.

PAIN POINT ADDRESSED

Tunde lost his verification session and gave up rather than restart.

Choose an account in plain language

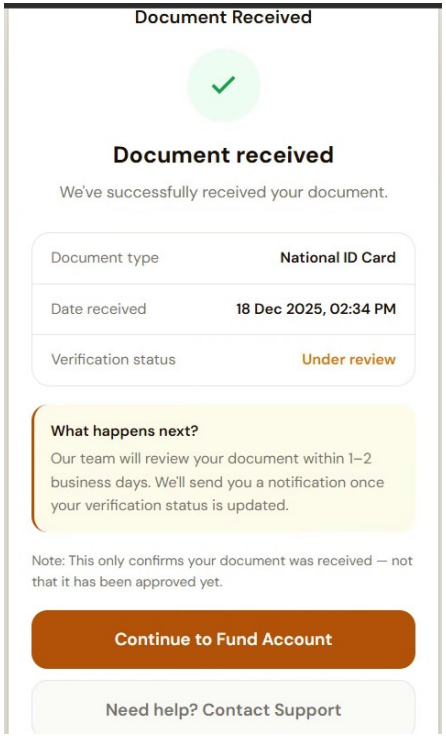

SCREENSHOT: PROTOTYPE, CHOOSE ACCOUNT TYPE

Tier names are replaced with Starter, Essential and Full Access. Each shows its daily limit and what it includes, and one option is marked as recommended so the choice is easy.

PAIN POINT ADDRESSED

Chiamaka was confused by unfamiliar account tier names with no plain explanation.

Confirmation after submitting documents

SCREENSHOT: PROTOTYPE, DOCUMENT RECEIVED

The customer sees the document type, the date and time received, the verification status and what happens next. A clear "Continue to Fund Account" action points to the next step.

PAIN POINT ADDRESSED

Grace received no confirmation that her documents had been received. Musa heard nothing and assumed failure.

Feedback existed, but it was fragmented

112

Care-line calls

89

App-store reviews

260

Social comments

Notebooks

Branch notes, not systematically counted

461+ feedback items across four channels

Customer feedback existed, but it was fragmented across channels and largely unsolicited and unstructured.

What customers were telling us

Transfer problems

Failed or delayed transfers, with money held for hours.

App friction

Repeated logouts and re-verification.

Need for human support

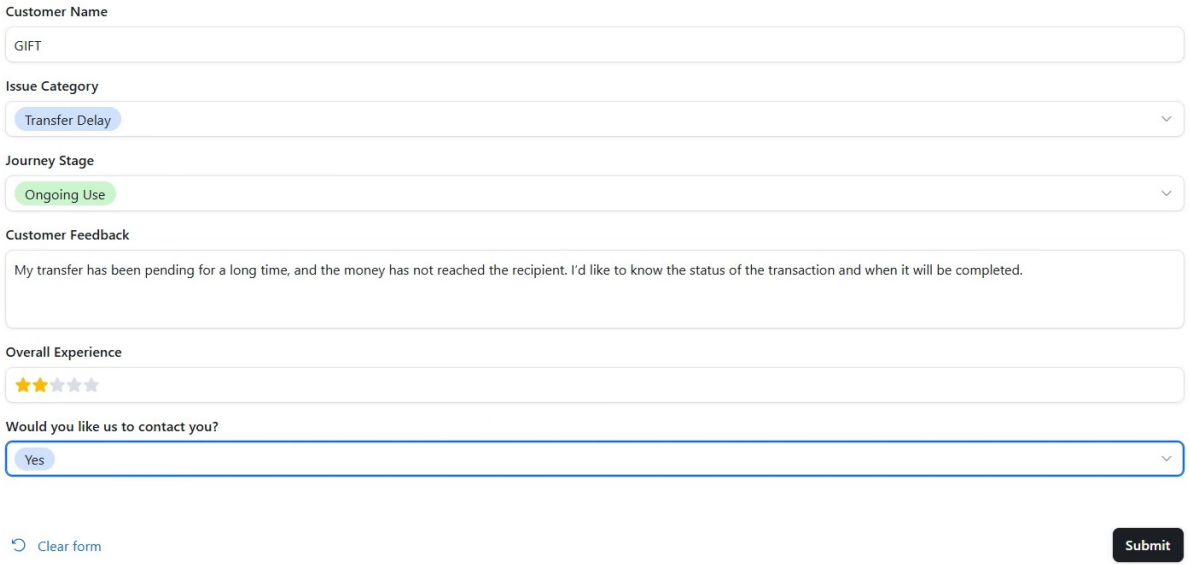

Customers asked for a way to reach a person inside the app.

Branch support needs

Branch notes showed some customers needed extra guidance.

The biggest problem was not simply that customers experienced issues. It was that the organisation lacked a consistent way to capture, consolidate, prioritise and act on those signals.

Capturing feedback in a structured form

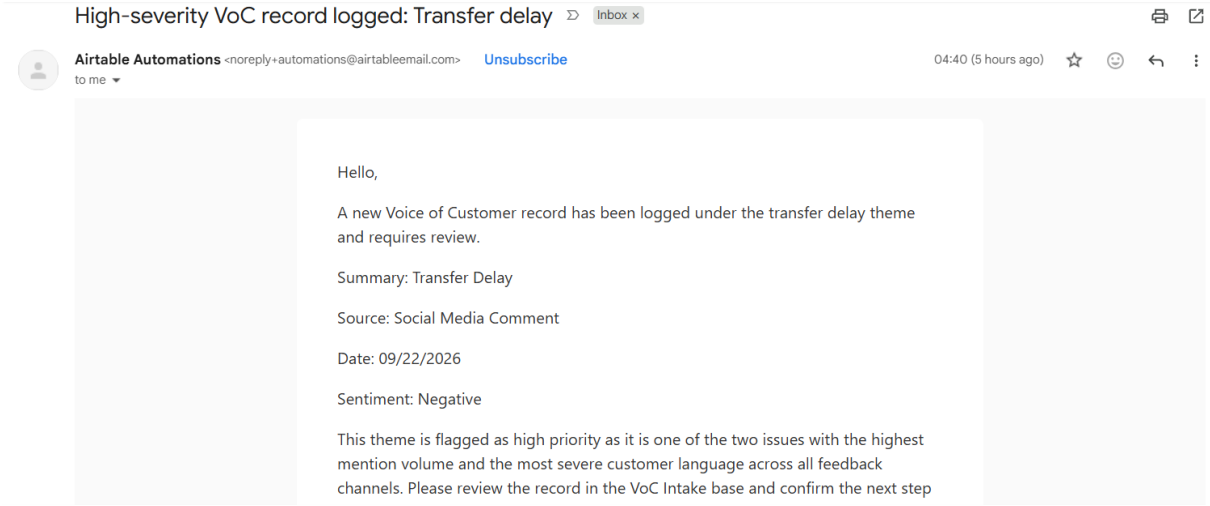

SCREENSHOT: PILOT FEEDBACK FORM

Captures the issue category, journey stage, the customer comment, an experience rating and whether the customer wants a call back. Every piece of feedback arrives structured and ready to prioritise.

Capture | **Categorise** | **Prioritise** | **Assign** | **Act** | **Close the loop**

High-severity feedback reaches an owner automatically

High-severity VoC record logged: Transfer delay Inbox ×

to me

Hello,

A new Voice of Customer record has been logged under the transfer delay theme and requires review.

Summary: Transfer Delay

Source: Social Media Comment

Date: 09/22/2026

Sentiment: Negative

This theme is flagged as high priority as it is one of the two issues with the highest mention volume and the most severe customer language across all feedback channels. Please review the record in the VoC Intake base and confirm the next step

SCREENSHOT: AUTOMATED ALERT

A high-severity record triggers an email with the theme, source, date and sentiment, and explains why it was flagged. Feedback no longer sits in call logs and notebooks without an owner.

The journey map: stages, pain points and opportunities

SCREENSHOT: JOURNEY MAP (MIRO). Two moments of truth: Activation and First use.

The fuller journey: seven stages, from actions to opportunities

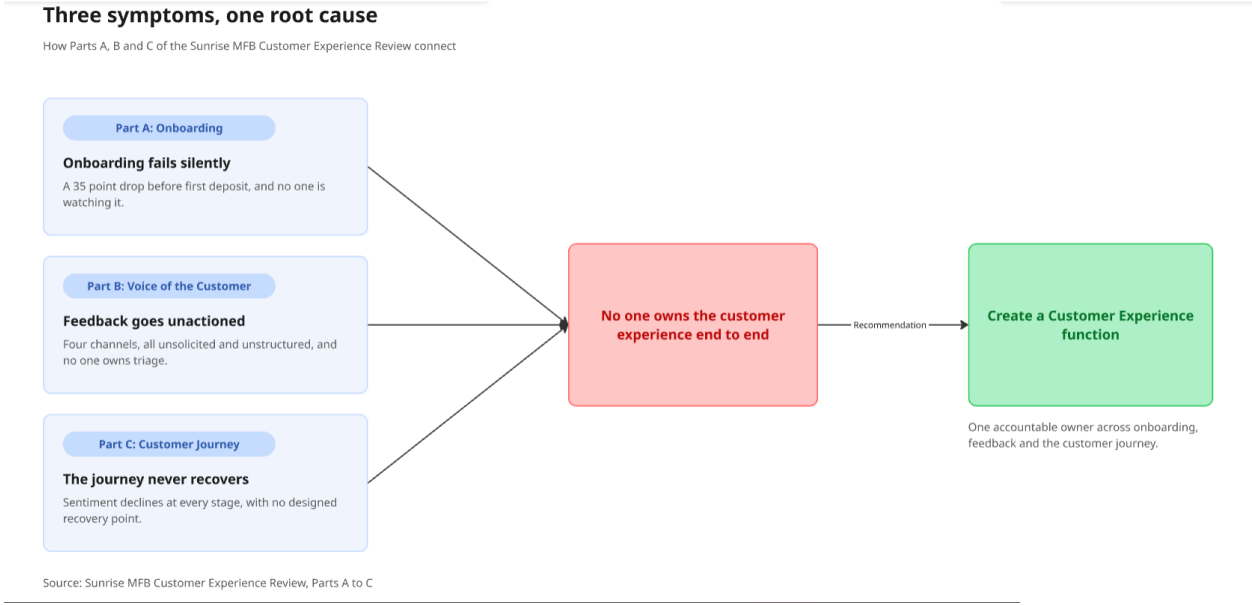

Consideration and Activation are added to the case's five stages (shown with a +ADDED tag); Consideration details are assumptions

	1 Awareness	2 Consideration (+ ADDED)	3 Onboarding	4 Activation (+ ADDED) — MOMENT OF TRUTH	5 First use — MOMENT OF TRUTH	6 Ongoing use	7 Loyalty / Advocacy
User actions	Hears about app from fellow trader	Weighs Sunrise against other options	Registers, verifies BVN, picks tier	Makes first deposit to fund account	Sends first bank transfer	Calls care, posts feedback	Uses app for loan payouts only
Touchpoints	Word of mouth from traders	App store page, agents	Sunrise Pocket app	App only, no follow-up contact	In-app transfer screen	Care line, app reviews, social	Trader network, word of mouth
Emotions	Interested, hopeful	Curious, unsure	Frustrated, confused	Anxious, in the dark	Anxious, doubtful	Disappointed	Guarded, not a promoter
Pain points	Word of mouth is the only channel	No clear comparison before download	Lost sessions, unclear tiers, no confirmation	Only 47% ever fund the account	6-hour delay, no in-app explanation	Generic replies, no human in app	No incentive to refer; warns others
Opportunities	Social, radio, agent outreach	Clear comparison, social proof	Resumable steps, plain tier names	Funding nudge within 24 hours	Live transfer status, set SLA	Unified feedback, in-app agent	Referral program, check-ins

Three symptoms, one root cause

SCREENSHOT: ROOT CAUSE BOARD (MIRO)

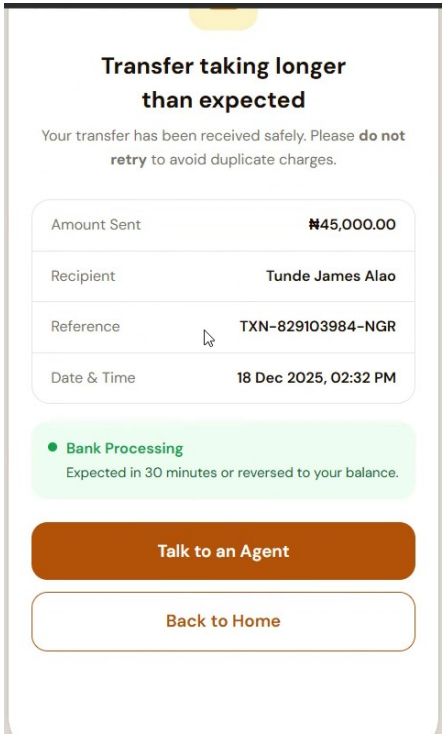

Onboarding fails silently, feedback goes unactioned and the journey never recovers. All three trace back to one gap: no one owns the customer experience end to end.

Recommendation: create a Customer Experience function with one accountable owner across onboarding, feedback and the journey.

Redesigned customer journey map

					MOMENT OF TRUTH	MOMENT OF TRUTH	
Stage	**1. Welcome**	**2. Verify**	**3. Choose account**	**4. Account ready**	**5. First deposit**	**6. First transaction**	**7. Ongoing support**
What changes	Set expectations and offer an agent-assisted option.	Save progress automatically and allow resume later.	Plain-language tiers and a clear comparison.	Instant confirmation and one clear next action.	Transfer, USSD or agent cash options, plus proactive follow-up.	Guided first transaction and clear transfer status.	"Talk to a person" human support.
Pain point fixed	Unclear what to expect	Lost verification session	Confusing account tiers	No confirmation, no next step	Only 47% fund their account	Unexplained 6-hour delay	No human fallback

First transaction: a clear status and a human option

SCREENSHOT: PROTOTYPE, TRANSFER STATUS

Instead of silence, the customer sees "Transfer taking longer than expected", the amount, recipient and reference, and a Bank Processing status with an expected time. A "Talk to an Agent" button gives a way to reach a person.

PAIN POINT ADDRESSED

Emeka's transfer was delayed for 6 hours with no explanation in the app, and 112 care calls were about held transfers.

How the redesign addresses customer pain points

Customer problem	UX / CX improvement
Verification session lost	**Save & continue later**
Confusing account tiers	**Plain-language account choices**
No confirmation	**Immediate document and status confirmation**
Customer unsure what to do next	**One clear next action**
Unfunded account	**24-hour funding nudge**
Transfer delay	**Real-time transfer status**
No human fallback	**Talk to a person**

How we would measure the improved experience

First-deposit conversion

47% > 65%

Current > proposed target

30-day activation

55% > 65%

Current > proposed target

ALSO TRACK

- Stalled registrations recovered
- Transfer-related care calls
- First-contact resolution
- Time to first value

The 65% figures are proposed targets, not achieved results.

The redesign connects customer research, Voice of Customer insights and journey mapping into one practical CX improvement framework.
